Ga commuter rail

This article needs to be updated. Please update this article to reflect recent events or newly available information. (September 2018) The Georgia Railroad Passenger Program (GRPP) is a set of programs, which have not yet been built, for intercity rail and passengers in the state of Georgia. Seven passenger routes have been offered to serve the Atlanta suburbs and nearby cities. Athens to Atlanta (Brain Train) Track in Athens, Georgia will connect nine Georgia colleges and universities, including the Georgia Institute of Technology, the University of Georgia, Emory University, Gwent College and the University of Georgia. Furthermore, the commuter train will link the Centers for Disease Control, Paul D. Coverdell Center for Biomedical and Health Sciences, as well as the evolving Bioscience Corridor along Georgia State Route 316. The route is estimated to divert 1.8 million drivers from highways by 2025. [1] About 8,000 or more people can use the system daily, and it can remove 5,300 cars a day from already busy road at peak travel times. Also, previous research has shown that a commuter train is 25 times safer than driving. The Georgia Brain Train Group is a nonprofit organization with the goal of educating the general public about the opportunities surrounding the commuter train. The group consists of community activists, business leaders and professionals from each province and city along the proposed route. The group is led by entrepreneur, re-developer, and former Georgia state representative Emory Morsberger of the Morsberger group. [2] Morsberger projects previously included the regeneration of Lawrenceville city center. [3] As currently proposed, the route will cost \$383 million as determined by a 2005 estimate. This price forecast includes construction, train stations, and rail. While ticket sales alone will not fully fund operating costs of \$5 million, it is important to note that no mass transportation system in the U.S. operates without any government subsidies. Transportation advocates often interpret transportation subsidies in parallel with road construction, which is generally fully subsidized, though ongoing operating costs may be lower. Atlanta Lovejoy and Macon Atlanta Lemcon had, as of 2006, been seen as the first line ready to be implemented, mainly because the railroad's owner, Norfolk Southern, had shown more interest than CSX, the owner of the Athens line. In addition, the Clayton County Commission proposed funding much of the line's operating costs, more than \$106 million in funding was available from the U.S. Department of Transportation, and the environmental assessment was complete. [4] Funding delays in April 2006, a line was introduced into the state budget prohibiting the Georgia Department of Transportation (GDOT) from spending money on passenger trains without the direct approval of the General Assembly. Railroad Supporters Last-minute sabotage of the program, as the General Assembly convenes only 40 days once a year. In addition, the Clayton County Commission withdrew in January 2007 from its commitment to fund the line's operating costs. Renewed interest in 2008 reawakened in 2008, and the governor backed it in June. In January 2008, a delegation of GDOT members visited Philadelphia and Chicago to see how passenger train systems were implemented in those cities. They also visited the LYNX light rail line in Charlotte. In early June, the delegation passed a largely symbolic resolution calling on the country's leaders to pass a transitional policy. In June 2008, under intense pressure from businesses and residents of Atlanta along with other politicians, Governor Sonny Perdue backed Ko Lovejoy and said he wanted him to go after aggressively. This may have been partly pushed by a visit the governor previously needed to delegate David Scott's office. David Scott warned that the deadline to act on the federal dollars would soon be over. [6] Bremen to Atlanta Southern Rail operated this line westbound toward Birmingham, Alabama. The line continues to be used today for Amtrak's Sahar. In the mid-1960s, the line was provided local service by the Kansas City-Florida Special and the South's #11/#12 Rail. Canton to Atlanta This train line will run from Canton and connect to the Western and Atlantic railway line that runs from Atlanta to Ekworth, and then continue along the western Atlantic via Marietta, Smyrna, Cumberland, Wing, and then Bolton County in Atlanta, West Midtown (near Georgia Tech),

and then connect to Midtown via Atlantic Station or continue to five points, or both. Outside the city limits of Atlanta along this route, the city's population is over 200,000 people if the high-density Cumberland County of Cobb County is included. In addition, remote areas will bring even more passengers. A financing mechanism has been found for the build up to Marietta from Atlanta using future years' revenue from CSX to recoup the initial costs of rapid construction. [1] Gainesville to Atlanta This line included a passenger operation until the early 1930s. It continues to be used by Amtrak for daily passenger service with the Cressor. Into the 1960s of the Southern Road this train and other trains such as Piedmont Ltd, Peach Queen, Southern, daily along the same route. Norfolk Southern Railway operates a transport service on this line. Atlanta to the traditionally social circle, it was the main line of Georgia's eastbound train toward Augusta. Atlanta to West Point Traditionally, it was the Atlanta and West Point railroad heading southwest toward Montgomery, Alabama. Trains such as Southern Railway Crescent and Piedmont Dimited made stops at West Point and the intermediate towns en route. [9] North Georgia Commuter Railway (NGCR) North Passenger Rail is a proposed new commuter rail network consisting of seven lines.
